U.S. Citizen | Eligible to obtain a U.S. Government Security Clearance | Open to Remote, Hybrid, or Relocation

LinkedIn: www.linkedin.com/in/d'andre-knight-358836251 | GitHub: github.com/dandrek123

PROFESSIONAL SUMMARY

Computer Science graduate with hands-on experience developing AI-powered applications, automation tools, voice assistants, full-stack web applications, and a custom interpreted programming language. Experienced with Python, Java, JavaScript, SQL, Linux, and modern software development practices. U.S. Citizen seeking entry-level software engineering, IT, systems engineering, and cybersecurity opportunities.

TECHNICAL SKILLS

Computer Science: Data Structures, Algorithms, Compiler Design, Programming Language Design, Parsing, Abstract Syntax Trees

Languages: Python, Java, C++, JavaScript, HTML, SQL | **Frameworks & Web:** Flask, React, Node.js, Express, MongoDB, SQLite, REST APIs

Tools/Systems: Git, Bash, Linux, Windows, macOS, command-line troubleshooting, system configuration

IT/Security: Network troubleshooting, user authentication, secure password storage, IT support, security fundamentals

AI/Automation: Local LLM workflows, prompt engineering, voice commands, document analysis, browser/desktop automation

EDUCATION & CERTIFICATION

Florida State University, Tallahassee, FL - **B.A. in Computer Science**, Minor in Professional Communication, Dec. 2025

Relevant Coursework: Deep & Reinforcement Learning, Web Application Programming, Databases, Software Engineering Capstone

Google IT Support Professional Certificate, June 2020 - troubleshooting, networking, system administration, operating systems, and security fundamentals

Honors: President's List, Fall 2025; Dean's List, Spring 2023

TECHNICAL EXPERIENCE & PROJECTS

Super Bit AI Desktop Assistant

Personal Project | Python, local LLMs, automation, speech recognition

- Built a Python desktop AI assistant with voice commands, local LLM integration, memory, reminders, weather, file ingestion, knowledge search, document analysis, and English/Spanish interaction.
- Added coding workflow automation, browser/desktop helpers, test execution, system troubleshooting, owner-only controls, secure password storage, and safe approval flows.

Athena Voice Bot Simulator

Personal Project | Python, Flask, SQLite, Google Gemini, Twilio Voice, HTML/CSS, Git | github.com/dandrek123/athena-voice-bot

- Developed an AI-powered healthcare voice assistant using Python, Flask, Twilio Voice, Google Gemini, and SQLite.
- Designed six healthcare conversation workflows, including appointment scheduling, prescription refills, insurance updates, patient registration, appointment cancellation, and rescheduling.
- Built a database-backed web dashboard with call summary cards, search and filter controls, analytics, scenario usage charts, CSV export, and print-friendly PDF report viewing.
- Implemented automated transcript logging, call quality scoring, warning detection, conversation memory, REST webhook handling, offline mock testing, debugging, and Git/GitHub version control.

KnightLang Programming Language

Personal Project | Python, Git, GitHub | github.com/dandrek123/KnightLang

- Designed and implemented a custom interpreted programming language from scratch in Python.
- Built a lexer, parser, abstract syntax tree (AST), and interpreter to execute KnightLang source code.
- Implemented variables, assignments, functions, if/else logic, while loops, comparison operators, strings, and indentation-based blocks.
- Applied recursive expression evaluation, debugging, and Git/GitHub version control throughout development.

MealMatch

Personal Project | PHP, MySQL, SQL, HTML, CSS | github.com/dandrek123/MealMatch

- Developed a full-stack web application that helps users discover and manage meals through an interactive matching platform.
- Implemented user registration, login authentication, session management, analytics tracking, and administrative tools.
- Designed and integrated a relational database to support user accounts, meal management, and application functionality.

Anti-Scam Awareness Web App

Group Project | MongoDB, Express, React, Node.js, Git | github.com/dandrek123/Bit_by_Bit

- Built a secure MERN application for users to report, review, and discuss online scams through profiles, comments, and forum-style interaction.
- Developed authentication, profile features, moderation tools, Git-based collaboration, code reviews, and a final project demo.

MissionShield Cyber Defense Readiness Dashboard

Personal Project | React, JavaScript, Node.js, Express, SQLite, HTML/CSS, Git | github.com/dandrek123/MissionShield

- Developed a full-stack cybersecurity readiness dashboard to track mission system readiness, cyber incidents, severity levels, operational risk, response actions, and dashboard filtering.
- Built a React frontend with summary cards, system and incident forms, SQLite-backed data storage, Express API routes, and filters for readiness, cyber risk, severity, and incident status.

IT Job Shadow

ARPIA Technology | June 2025

- Observed IT professionals supporting system maintenance, troubleshooting workflows, equipment setup, user support, teamwork, and professional communication.

Additional Projects

Network Communication Setup; Live Translation App

- Configured and tested client-server communication with command-line networking tools while applying basic security and system configuration practices.
- Built a real-time voice/text translation app using Python, speech recognition concepts, third-party APIs, and a user-friendly interface.
